LEADERSHIP
in Infection Control

Sterilisation is usually the last step of reprocessing, following cleaning, disinfection and maintenance. For critical-use instruments, where sterility is mandatory, this essential step requires both proper use by office staff and reliable performance from the autoclave.

For over 25 years, STATIM's efficiency, short cycle times, dependability, and reliability have made it one of the world's best-selling cassette autoclaves. Utilizing an innovative sterilisation process (Positive Pressure Pulse Displacement – PPPD) and the DriTec drying technology, STATIM ensures clinicians always have an ample supply of instruments ready for use. In addition, STATIM meets all applicable EU-standards and RKI requirements.

Originally founded in 1957, SciCan develops and manufactures highly innovative infection control products that address the need for speed, flexibility, and efficiency in today's environments.

In 1989, SciCan developed and produced an internationally recognized infection control innovation, the STATIM Cassette Autoclave. Over the next quarter century, SciCan continued to be at the forefront of technology with the release of the HYDRIM® Instrument Washer-Disinfectors, BRAVO™ Chamber Autoclaves, and G4 Networking Technology.

SciCan is a global leader in infection control specializing in dentistry and ophthalmology in more than 100 countries around the world. The portfolio of products continues to grow to address market needs; with innovations such as the STATMATIC™ Smart, our handpiece cleaning and maintenance unit, and the OPTIM® 1 Cleaner and Disinfectant.

In 2007, SciCan opened the European headquarters, located in Germany. Our team consists of highly motivated and technically informed individuals whose network of authorities, infection control specialists and other manufacturers allow us to provide legally compliant and evidence-based information. We work closely with specialists in the dental and medical field, enabling us to provide practical guidance and help drive product improvements that will benefit our customers.

It is very important to me and my team, especially in the time of online sales, to offer you not only the best products but also a service that makes our customers feel well advised and cared for. Please don't hesitate to contact our office for any infection control related questions.

All the best,

Stefan Helsing (Managing Director)

STAT*IM* G4
Cassette Autoclaves

G4 Technology

Allows for reliable load release, documentation and data storage; connects and sends cycle data to your smart devices or computer, providing easily accessible cycle data, and maintenance information. Should you wish, G4 technology can connect your STATIM to specialized technicians, which allows for remote support.

Capacity

Despite their compact dimensions, STATIM autoclaves offer enough capacity to meet the needs of a busy practice; the STATIM 2000S capacity allows for up to 4 pouches, or a 1.0kg load, and the STATIM 5000S allows for up to 10 pouches or a 1.5kg load.

Compliant

EN 13060 compliant & offers reproduceable sterilisation results that can be validated. Sterilisation efficacy proven by an independent research institute.

Gentle

The fresh water feature guarantees fresh water with every cycle. State-of-the-art steam technology is gentle on both solid and hollow instruments.

Flexible Design

Two sizes of STATIM units and a number of wrapped and unwrapped cycle options make the STATIM autoclaves ideal as a standalone unit or as a compliment to a chamber autoclave.

Standards

The European Standard for small steam sterilisers (EN 13060) classifies three types of sterilisation cycles: B, S and N.

Type of Cycle	Description of approved use by EN 13060
S	The sterilisation of products as specified by the manufacturer of the steriliser including non-wrapped solid products and at least one of the following: porous products, small porous items, lumen devices, bowls & receivers, single-layer wrapped products, multiple-layer wrapped products
N	The sterilisation of non-wrapped solid products
B	The sterilisation of all wrapped (single and multiple layer) or non-wrapped, solid, lumen devices and porous products as represented by the test loads in this standard

For S-autoclaves like the STATIM, the sterilisable product categories are specified by the manufacturer. The STATIM autoclaves are tested by independent research institutes for specific instruments, including wrapped and unwrapped hollow and solid instruments. The testing results indicate that various semi-critical and critical instruments can be safely sterilised in the STATIM.

Tested Handpieces			
SycoTec	STATIS High Speeds	Bien-Air	Bora L
SycoTec	STATIS Low Speeds	Midwest	Tradition
SycoTec	SANAO 200L	Sirona	T1 Classic, S 40 L
SycoTec	SANAO PSO	Sirona	T1 Control, TC3
KaVo	Gentle Power 25 LPA	STAR	430 SWL
KaVo	Gentleforce 7000C	W&H	TA-98LC*
KaVo	Intramatic LUX3, 20 LH	W&H	Trend HS, TC-95RM
KaVo	Super-Torque LUX/640 B	W&H	Trend LS, WD-56
NSK	ATL118040	W&H	WA-99 LT*
NSK	PanaAir	W&H	WS-75*
NSK	Ti-Max		

The above mentioned instruments have been tested by independent parties. These tests show that semi-critical and critical, wrapped or unwrapped instruments can be safely sterilised in the STATIM autoclave.

* Wrapped cycle

A specially designed Process Challenge Device is available to demonstrate that the sterilisation parameters required have been achieved. It can be used for the daily routine check and/or as additional cycle documentation. In addition, STATIM also documents its own successful cycle. A computerized microprocessor aborts the cycle if any of the monitored parameters of temperature, pressure, or time are not achieved.

Conformity

STATIM 2000/5000 G4 are produced in conformity with the following directives and standards:

93/42/EEC	Medical device class IIa (European directive for medical devices)	EN ISO 13485:2016	Medical devices – Quality management systems – requirements for regulatory purposes
EN 13060: 2014 + A1:2018	Small steam sterilisers	EN ISO 14971:2012	Application of risk management to medical devices
EN 61010-1:2010	Safety requirements for electrical equipment for measurement, control and laboratory use- part 1: general requirements	EN ISO 62304:2006	Software medical products
EN 61010-2-040:2015	Safety requirements for electrical equipment for measurement, control and laboratory use	EN ISO 15223:2016	Labelling of medical products
EN 61326-1:2013	Electrial equipment for measurement, control and laboratory use – EMC requirements – Part 1		

Gentle Sterilisation and
Short Cycle Times - Possible with STAT*IM*

Unlike conventional autoclaves which heat up an entire reservoir of water, STATIM uses only a small, specific amount of water required for each cycle, which makes the STATIM an efficient, time- and cost-saving device.

The thin stainless steel walls of STATIM's fully removable cassette (sterilisation chamber) allow for rapid heating and cooling of the chamber. This helps STATIM to provide the short cycle and drying times.

With the DriTec drying technology, the STATIM units use the heat that remains in the cassette after the sterilisation process to rapidly dry instruments. The heat emitted into the cassette, and drying plates when using the STATIM 5000, allows for quick drying of wrapped instruments.

The state-of-the-art steam technology is gentle on both solid and hollow instruments. Using fresh water with every cycle helps reduce the build-up of oils and debris.

Compare the Results

The STATIM 2000 G4 and 5000 G4 cassette autoclaves deliver dramatic improvements in process efficiency through shorter cycle times.

Button	Cycle	Load (max.)	Sterilisation Temperature	Sterilisation Time (Minutes)	Cycle Time* (mm:ss)

	Air Drying Only		**Not a Sterilisation Cycle**			

*Drying not included
**Cycle for routine check (STATIM PCD) test
†Cycle only available in Germany

G4 Technology

A special feature of the STATIM units is the innovative G4 technology. A large touch screen provides in-depth cycle information and allows users to view current operations.

With an integrated Ethernet port, STATIM units can connect to the office network and send cycle data to your smart devices or computer, providing easily accessible cycle data, and maintenance information. To help optimize office processes, the STATIM can be configured to email cycle information or error messages directly to office staff or service technicians.

Cycle data is automatically saved internally, on a USB, and can also be emailed or printed with a network printer. This is a unique feature to STATIM that has been specifically designed for meeting the growing legal demand of physical filing of cycle data. The STATIM G4 units have a traceability feature that requires a user code when releasing a load.

Silicone Mat

Keep your STATIM looking new with the StatMat Silicone Mat. The high quality silicone protects the STATIM from accidental scuffs and scrapes when the cassette is placed on top of the unit, while helping to dissipate heat and protect surfaces from damage caused by heat transfer from hot metal surfaces. The mat is available in two different sizes, suitable for the STATIM 2000 or STATIM 5000.

SYS-TM Cassettes

The sturdy SYS-TM instrument cassettes made of surgical steel protect delicate instruments and enable safe and efficient transport and reprocessing. The cassettes can be used in a washer-disinfector as well as in an autoclave. With the different sizes of the SYS-TM instrument cassettes, the respective unit capacities can be ideally used. With the silicone holding straps the instruments are, despite minimal contact areas, held safely in place in the cassette. For a better allocation, silicone strips in different colours are available on request.

Sys-TM 1

Examination Size Cassette (7 Instruments) (64 x 178 x 13 mm)

Sys-TM 2

Handpiece/Surgical Size Cassette (64 x 178 x 25 mm)
